Price: R1500,00

Who should attend Photoshop for Video Editors training

Many video editing applications offer features which match some of the functionality offered by Photoshop, however it remains the most popular application for image manipulation due to its universal popularity. This course is specifically designed for video editors who are required to incorporate Photoshop image manipulation into their workflow. For DTP professionals a more comprehensive training course would be advised.

What will I learn

After successful completion of this course you are able to import stills and images and touch them up for incorporation into your video production.
